_____

TEKS Curriculum Framework for STAAR Alternate 2

Grade 4 Mathematics

STAAR Alternate 2 Mathematics Instructional Terms

The curriculum that will be assessed each year for STAAR Alternate 2 is determined by the essence statements that are selected for each administration. Teachers should refer to the Curriculum Framework documents for each selected essence statement to locate the prerequisite skills that are linked to that essence statement. Instruction should focus on the listed prerequisite skills. The teacher should determine what skills have been mastered and which need to be taught according to the developmental level of the student. The goal should be to assist the student in attaining the highest academic level the student is capable of within a given year. In addition to the prerequisite skills, there are instructional terms that students will need exposure to during instruction. The following list includes the terms for all the essence statements and not just the ones selected for a given administration. Students need to become familiar with these terms as the student is developmentally able to comprehend the content. Students in higher grades need to also know the terms presented in earlier grades.

Grade 3 Mathematics

set /dividing equally	alike/same as/different	length/longer/longest	three-dimensional geometric figures: sphere, cube, cone, rectangular prism, cylinder, pyramid
addition/subtraction models	pattern/extend	order: least to greatest, longest to shortest	
equal/total	number pair		
plus/minus	graph: category, label, row, column	measurement: weight, mass, capacity, area, height	needs/wants as related to budgets
number sentence	chart/picture graph/bar graph		earn money/save/spend
fact family	representation/represents	attributes: vertices, faces, edges	names and values of coins
numeral/odd/even	record/results/data	two-dimensional shape: circle, triangle, rectangle, square, polygon	
next to/after/before/between	fraction: whole, half, separate		

Grade 4 Mathematics

less than/more than	fractions: shaded parts of a whole, halves, fourths	symmetry	rounding
most/least		volume	spending plan

Grade 5 Mathematics

equation	triangles: right, acute, obtuse	parallel/intersecting/ perpendicular lines	coordinate grid
equivalent fractions	congruent		decimal
numerator/denominator	square inch	number line/point on a number line	estimation
attributes of geometric figures: sides			

Grade 6 Mathematics

divide	table of related or paired numbers	area and formula of a rectangle or square: (length, width)	income/saving/spending
number line: whole numbers, halves	pictograph/line graph/point		ratio

Grade 7 Mathematics

multiply	congruence	linear relationships	mean/median/mode/range
attributes of geometric figures: bases	formula for perimeter	conversions	proportional
	percent	radius/diameter/circumference	budget/deposit/withdrawal

Grade 8 Mathematics

line of symmetry	horizontal/vertical	increase/decrease/expenses	probability

Algebra I

grid/unit	square feet	rate/rate of change	expressions
recycled			

STAAR Reporting Category 1 – Numerical Representations and Relationships: The student will demonstrate an understanding of how to represent and manipulate numbers and expressions.

TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations	Essence of TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations
(4.2) Number and operations. The student applies mathematical process standards to represent, compare, and order whole numbers and decimals and understand relationships related to place value. The student is expected to (A) interpret the value of each place-value position as 10 times the position to the right and as one-tenth of the value of the place to its left; Supporting Standard (B) represent the value of the digit in whole numbers through 1,000,000,000 and decimals to the hundredths using expanded notation and numerals; Readiness Standard (C) compare and order whole numbers to 1,000,000,000 and represent comparisons using the symbols >, <, or =; Supporting Standard (D) round whole numbers to a given place value through the hundred thousands place; Supporting Standard (E) represent decimals, including tenths and hundredths, using concrete and visual models and money; Supporting Standard (F) compare and order decimals using concrete and visual models to the hundredths; Supporting Standard (G) relate decimals to fractions that name tenths and hundredths; Readiness Standard (H) determine the corresponding decimal to the tenths or hundredths place of a specified point on a number line. Supporting Standard	Uses number relationships to demonstrate an understanding of place value.

4.2	Prerequisite Skills/Links to TEKS Vertical Alignment

Representing and Using Fractions, Decimals, Percents and Probability
- compare two fractions having the same numerator or denominator in problems by reasoning about their sizes and justifying the conclusion using symbols, words, objects, and pictorial models
- represent equivalent fractions with denominators of 2, 3, 4, 6, and 8 using a variety of objects and pictorial models, including number lines

Continued

4.2	**Prerequisite Skills/Links to TEKS Vertical Alignment**

- solve problems involving partitioning an object or a set of objects among two or more recipients using pictorial representations of fractions with denominators of 2, 3, 4, 6, and 8
- compose and decompose a fraction a/b with a numerator greater than zero and less than or equal to b as a sum of parts $1/b$
- explain that the unit fraction $1/b$ represents the quantity formed by one part of a whole that has been partitioned into b equal parts where b is a non-zero whole number
- represent fractions greater than zero and less than or equal to one with denominators of 2, 3, 4, 6, and 8 using concrete objects and pictorial models, including strip diagrams and number lines
- identify examples and non-examples of halves, fourths, and eighths
- use concrete models to count fractional parts beyond one whole using words and recognize how many parts it takes to equal one whole
- explain that the more fractional parts used to make a whole, the smaller the part: the fewer the fractional parts, the larger the part
- partition objects into equal parts and name the parts, including halves, fourths, and eighths, using words
- identify examples and non-examples of halves and fourths
- partition two-dimensional figures into two and four fair shares or equal parts and describe the parts using words

Determining and Simplifying Numeric and Algebraic Expressions
- describe the mathematical relationships found in the base-10 place value system through the hundred thousands place
- compose and decompose numbers up to 100,000 as a sum of so many ten thousands, so many thousands, so many hundreds, so many tens, and so many ones using objects, pictorial models, and numbers, including expanded notation as appropriate
- use standard, word, and expanded forms to represent numbers up to 1,200
- use concrete and pictorial models to compose and decompose numbers up to 1,200 in more than one way as a sum of so many thousands, hundreds, tens, and ones
- apply properties of operations to add and subtract two or three numbers
- use objects, pictures, and expanded and standard forms to represent numbers up to 120
- use concrete and pictorial models to compose and decompose numbers up to 120 in more than one way as so many hundreds, so many tens, and so many ones
- compose and decompose numbers up to 10 with objects and pictures

Comparing, Ordering, and Rounding Numbers Using Place Value
- compare and order whole numbers up to 100,000 and represent comparisons using the symbols >, <, or =)
- use an understanding of place value to determine the number that is 10 or 100 more or less than a given number up to 1,200
- use place value to compare and order whole numbers up to 1,200 using comparative language, numbers, and symbols (>, <, or =)
- use relationships to determine the number that is 10 more and 10 less than a given number up to 120
- represent the comparison of two numbers to 100 using the symbols >,<, or =
- order whole numbers up to 120 using place value and open number lines
- use place value to compare whole numbers up to 120 using comparative language
- use comparative language to describe two numbers up to 20 presented as written numerals

Continued

4.2	**Prerequisite Skills/Links to TEKS Vertical Alignment**
	• compare sets of objects up to at least 20 in each set using comparative language *Identifying Points and Distances on Number Lines* • represent fractions of halves, fourths, and eighths as distances from zero on a number line • explain that two fractions are equivalent if and only if they are both represented by the same point on the number line or represent the same portion of a same size whole for an area model • determine the corresponding fraction greater than zero and less than or equal to one with denominators of 2, 3, 4, 6, and 8 given a specified point on a number line • represent a number on a number line as being between two consecutive multiples of 10; 100; 1,000; or 10,000 and use words to describe relative size of numbers in order to round whole numbers • represent whole numbers as distances from any given location on a number line • name the whole number that corresponds to a specific point on a number line • locate the position of a given whole number on an open number line **Geometry and spatial sense skills** • demonstrate use of location words (such as "over," "under," "above," "on," "beside," "next to," "between," "in front of," "near," "far," etc.) *Recognizing Numbers and Counting* • determine if a number is even or odd using divisibility rules • determine whether a number up to 40 is even or odd using pairings of objects to represent the number • generate a number that is greater than or less than a given whole number up to 1,200 • skip count by twos, fives, and tens to determine the total number of objects up to 120 in a set • recite numbers forward and backward from any given number between 1 and 120 • generate a number that is greater than or less than a given whole number up to 120 • recognize instantly the quantity of structured arrangements • recite numbers up to at least 100 by ones and tens beginning with any given number • generate a number that is one more than or one less than another number up to at least 20 • generate a set using concrete and pictorial models that represents a number that is more than, less than, and equal to a given number up to 20 • recognize instantly the quantity of a small group of objects in organized and random arrangements • count a set of objects up to at least 20 and demonstrate that the last number said tells the number of objects in the set regardless of their arrangement or order • read, write, and represent whole numbers from 0 to at least 20 with and without objects or pictures • count forward and backward to at least 20 with and without objects

Continued

4.2	**Prerequisite Skills/Links to TEKS Vertical Alignment**
	Counting skills • recognize one-digit numerals, 0-9 • verbally identify, without counting, the number of objects from 1 to 5 • use the verbal ordinal terms • demonstrate understanding that when counting, the items can be chosen in any order • count up to 10 items, and demonstrate that the last count indicates how many items were counted • demonstrate that the order of the counting sequence is always the same, regardless of what is counted • count 1-10 items, with one count per item • use words to rote count from 1 to 30 • know that objects, or parts of an object, can be counted

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

STAAR Reporting Category 1 – Numerical Representations and Relationships: The student will demonstrate an understanding of how to represent and manipulate numbers and expressions.

TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations	Essence of TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations
(4.3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to (A) represent a fraction a/ b as a sum of fractions 1/ b, where a and b are whole numbers and b > 0, including when a > b; Supporting Standard (B) decompose a fraction in more than one way into a sum of fractions with the same denominator using concrete and pictorial models and recording results with symbolic representations; Supporting Standard (C) determine if two given fractions are equivalent using a variety of methods; Supporting Standard (D) compare two fractions with different numerators and different denominators and represent the comparison using the symbols >, =, or <; Readiness Standard (G) represent fractions and decimals to the tenths or hundredths as distances from zero on a number line. Supporting Standard	Models and finds relationships among fractional units.

4.3	Prerequisite Skills/Links to TEKS Vertical Alignment
	Representing and Using Fractions, Decimals, Percents and Probability • compare two fractions having the same numerator or denominator in problems by reasoning about their sizes and justifying the conclusion using symbols, words, objects, and pictorial models • represent equivalent fractions with denominators of 2, 3, 4, 6, and 8 using a variety of objects and pictorial models, including number lines • solve problems involving partitioning an object or a set of objects among two or more recipients using pictorial representations of fractions with denominators of 2, 3, 4, 6, and 8 • compose and decompose a fraction *a/ b* with a numerator greater than zero and less than or equal to *b* as a sum of parts 1/ *b* • explain that the unit fraction 1/ *b* represents the quantity formed by one part of a whole that has been partitioned into *b* equal parts where *b* is a non-zero whole number • represent fractions greater than zero and less than or equal to one with denominators of 2, 3, 4, 6, and 8 using concrete objects and pictorial models, including strip diagrams and number lines

Continued

4.3	**Prerequisite Skills/Links to TEKS Vertical Alignment**
	• identify examples and non-examples of halves, fourths, and eighths
	• use concrete models to count fractional parts beyond one whole using words and recognize how many parts it takes to equal one whole
	• explain that the more fractional parts used to make a whole, the smaller the part: the fewer the fractional parts, the larger the part
	• partition objects into equal parts and name the parts, including halves, fourths, and eighths, using words
	• identify examples and non-examples of halves and fourths
	• partition two-dimensional figures into two and four fair shares or equal parts and describe the parts using words
	Identifying Points and Distances on Number Lines
	• represent fractions of halves, fourths, and eighths as distances from zero on a number line
	• explain that two fractions are equivalent if and only if they are both represented by the same point on the number line or represent the same portion of a same size whole for an area model
	• determine the corresponding fraction greater than zero and less than or equal to one with denominators of 2, 3, 4, 6, and 8 given a specified point on a number line
	• represent a number on a number line as being between two consecutive multiples of 10; 100; 1,000; or 10,000 and use words to describe relative size of numbers in order to round whole numbers
	• represent whole numbers as distances from any given location on a number line
	• name the whole number that corresponds to a specific point on a number line
	• locate the position of a given whole number on an open number line
	Geometry and spatial sense skills
	• demonstrate use of location words (such as "over," "under," "above," "on," "beside," "next to," "between," "in front of," "near," "far," etc.)
	Recognizing Numbers and Counting
	• determine if a number is even or odd using divisibility rules
	• determine whether a number up to 40 is even or odd using pairings of objects to represent the number
	• generate a number that is greater than or less than a given whole number up to 1,200
	• skip count by twos, fives, and tens to determine the total number of objects up to 120 in a set
	• recite numbers forward and backward from any given number between 1 and 120
	• generate a number that is greater than or less than a given whole number up to 120
	• recognize instantly the quantity of structured arrangements
	• recite numbers up to at least 100 by ones and tens beginning with any given number
	• generate a number that is one more than or one less than another number up to at least 20
	• generate a set using concrete and pictorial models that represents a number that is more than, less than, and equal to a given number up to 20
	• recognize instantly the quantity of a small group of objects in organized and random arrangements

Continued

4.3	**Prerequisite Skills/Links to TEKS Vertical Alignment**
	• count a set of objects up to at least 20 and demonstrate that the last number said tells the number of objects in the set regardless of their arrangement or order • read, write, and represent whole numbers from 0 to at least 20 with and without objects or pictures • count forward and backward to at least 20 with and without objects **Counting skills** • recognize one-digit numerals, 0-9 • verbally identify, without counting, the number of objects from 1 to 5 • use the verbal ordinal terms • demonstrate understanding that when counting, the items can be chosen in any order • count up to 10 items, and demonstrate that the last count indicates how many items were counted • demonstrate that the order of the counting sequence is always the same, regardless of what is counted • count 1-10 items, with one count per item • use words to rote count from 1 to 30 • know that objects, or parts of an object, can be counted

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

STAAR Reporting Category 2 – Computations and Algebraic Relationships: The student will demonstrate an understanding of how to perform operations and represent algebraic relationships.

TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations	Essence of TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations
(4.3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to (E) represent and solve addition and subtraction of fractions with equal denominators using objects and pictorial models that build to the number line and properties of operations; Readiness Standard (F) evaluate the reasonableness of sums and differences of fractions using benchmark fractions 0, 1/ 4, 1/ 2, 3/ 4, and 1, referring to the same whole. Supporting Standard	Solves addition or subtraction problems involving fractions.

4.3	Prerequisite Skills/Links to TEKS Vertical Alignment
	Representing and Using Fractions, Decimals, Percents and Probability • compare two fractions having the same numerator or denominator in problems by reasoning about their sizes and justifying the conclusion using symbols, words, objects, and pictorial models • represent equivalent fractions with denominators of 2, 3, 4, 6, and 8 using a variety of objects and pictorial models, including number lines • solve problems involving partitioning an object or a set of objects among two or more recipients using pictorial representations of fractions with denominators of 2, 3, 4, 6, and 8 • compose and decompose a fraction *a/ b* with a numerator greater than zero and less than or equal to *b* as a sum of parts 1/ *b* • explain that the unit fraction 1/ *b* represents the quantity formed by one part of a whole that has been partitioned into *b* equal parts where *b* is a non-zero whole number • represent fractions greater than zero and less than or equal to one with denominators of 2, 3, 4, 6, and 8 using concrete objects and pictorial models, including strip diagrams and number lines • identify examples and non-examples of halves, fourths, and eighths • use concrete models to count fractional parts beyond one whole using words and recognize how many parts it takes to equal one whole • explain that the more fractional parts used to make a whole, the smaller the part: the fewer the fractional parts, the larger the part • partition objects into equal parts and name the parts, including halves, fourths, and eighths, using words • identify examples and non-examples of halves and fourths • partition two-dimensional figures into two and four fair shares or equal parts and describe the parts using words

Continued

4.3	**Prerequisite Skills/Links to TEKS Vertical Alignment**
	Adding and Subtracting Whole Numbers, Fractions, and Decimals
	• round to the nearest 10 or 100 or use compatible numbers to estimate solutions to addition and subtraction problems
	• solve with fluency one- step and two-step problems involving addition and subtraction within 1,000 using strategies based on place value, properties of operations, and the relationship between addition and subtraction
	• solve one-step and multi-step word problems involving addition and subtraction within 1,000 using a variety of strategies based on place value, including algorithms
	• add up to four two-digit numbers and subtract two- digit numbers using mental strategies and algorithms based on knowledge of place value and properties of operations
	• recall basic facts to add and subtract within 20 with automaticity
	• explain strategies used to solve addition and subtraction problems up to 20 using spoken words, objects, pictorial models, and number sentences
	• apply basic fact strategies to add and subtract within 20, including making 10 and decomposing a number leading to a 10
	• compose 10 with two or more addends with and without concrete objects
	• use objects and pictorial models to solve word problems involving joining, separating, and comparing sets within 20 and unknowns as any one of the terms in the problem such as 2 + 4 = [ ]; 3 + [ ] = 7; and 5 = [ ] − 3
	• use concrete and pictorial models to determine the sum of a multiple of 10 and a one- digit number in problems up to 99
	• explain the strategies used to solve problems involving adding and subtracting within 10 using spoken words, concrete and pictorial models, and number sentences
	• solve word problems using objects and drawings to find sums up to 10 and differences within 10
	• model the action of joining to represent addition and the action of separating to represent subtraction
	Adding to/taking away skills
	• use informal strategies to share or divide up to 10 items equally
	• use concrete models or make a verbal word problem for subtracting 1–5 objects from a set
	• use concrete models or make a verbal word problem for adding up to 5 objects
	Recognizing Numbers and Counting
	• determine if a number is even or odd using divisibility rules
	• determine whether a number up to 40 is even or odd using pairings of objects to represent the number
	• generate a number that is greater than or less than a given whole number up to 1,200
	• skip count by twos, fives, and tens to determine the total number of objects up to 120 in a set
	• recite numbers forward and backward from any given number between 1 and 120
	• generate a number that is greater than or less than a given whole number up to 120
	• recognize instantly the quantity of structured arrangements
	• recite numbers up to at least 100 by ones and tens beginning with any given number
	Continued

4.3	**Prerequisite Skills/Links to TEKS Vertical Alignment**
	- generate a number that is one more than or one less than another number up to at least 20 - generate a set using concrete and pictorial models that represents a number that is more than, less than, and equal to a given number up to 20 - recognize instantly the quantity of a small group of objects in organized and random arrangements - count a set of objects up to at least 20 and demonstrate that the last number said tells the number of objects in the set regardless of their arrangement or order - read, write, and represent whole numbers from 0 to at least 20 with and without objects or pictures - count forward and backward to at least 20 with and without objects **Counting skills** - recognize one-digit numerals, 0-9 - verbally identify, without counting, the number of objects from 1 to 5 - use the verbal ordinal terms - demonstrate understanding that when counting, the items can be chosen in any order - count up to 10 items, and demonstrate that the last count indicates how many items were counted - demonstrate that the order of the counting sequence is always the same, regardless of what is counted - count 1-10 items, with one count per item - use words to rote count from 1 to 30 - know that objects, or parts of an object, can be counted

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

STAAR Reporting Category 2 – Computations and Algebraic Relationships: The student will demonstrate an understanding of how to perform operations and represent algebraic relationships.	
TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations	**Essence of TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations**
(4.4) Number and operations. The student applies mathematical process standards to develop and use strategies and methods for whole number computations and decimal sums and differences in order to solve problems with efficiency and accuracy. The student is expected to (A) add and subtract whole numbers and decimals to the hundredths place using the standard algorithm; Readiness Standard (B) determine products of a number and 10 or 100 using properties of operations and place value understandings; Supporting Standard (C) represent the product of 2 two-digit numbers using arrays, area models, or equations, including perfect squares through 15 by 15; Supporting Standard (D) use strategies and algorithms, including the standard algorithm, to multiply up to a four-digit number by a one-digit number and to multiply a two-digit number by a two-digit number. Strategies may include mental math, partial products, and the commutative, associative, and distributive properties; Supporting Standard (E) represent the quotient of up to a four-digit whole number divided by a one-digit whole number using arrays, area models, or equations; Supporting Standard (F) use strategies and algorithms, including the standard algorithm, to divide up to a four-digit dividend by a one-digit divisor; Supporting Standard (G) round to the nearest 10, 100, or 1,000 or use compatible numbers to estimate solutions involving whole numbers; Supporting Standard (H) solve with fluency one- and two-step problems involving multiplication and division, including interpreting remainders. Readiness Standard	Solves problems using operations involving whole numbers or decimals.

4.4	**Prerequisite Skills/Links to TEKS Vertical Alignment**
	Adding and Subtracting Whole Numbers, Fractions, and Decimals • round to the nearest 10 or 100 or use compatible numbers to estimate solutions to addition and subtraction problems • solve with fluency one- step and two-step problems involving addition and subtraction within 1,000 using strategies based on place value, properties of operations, and the relationship between addition and subtraction • solve one-step and multi-step word problems involving addition and subtraction within 1,000 using a variety of strategies based on place value, including algorithms • add up to four two-digit numbers and subtract two- digit numbers using mental strategies and algorithms based on knowledge of place value and properties of operations • recall basic facts to add and subtract within 20 with automaticity • explain strategies used to solve addition and subtraction problems up to 20 using spoken words, objects, pictorial models, and number sentences • apply basic fact strategies to add and subtract within 20, including making 10 and decomposing a number leading to a 10 • compose 10 with two or more addends with and without concrete objects • use objects and pictorial models to solve word problems involving joining, separating, and comparing sets within 20 and unknowns as any one of the terms in the problem such as 2 + 4 = [ ]; 3 + [ ] = 7; and 5 = [ ] – 3 • use concrete and pictorial models to determine the sum of a multiple of 10 and a one- digit number in problems up to 99 • explain the strategies used to solve problems involving adding and subtracting within 10 using spoken words, concrete and pictorial models, and number sentences • solve word problems using objects and drawings to find sums up to 10 and differences within 10 • model the action of joining to represent addition and the action of separating to represent subtraction *Multiplying Whole Numbers, Fractions, and Decimals* • describe a multiplication expression as a comparison such as 3 x 24 represents 3 times as much as 24 • use strategies and algorithms, including the standard algorithm, to multiply a two-digit number by a one-digit number. Strategies may include mental math, partial products, and the commutative, associative, and distributive properties • recall facts to multiply up to 10 by 10 with automaticity and recall the corresponding division facts • represent multiplication facts by using a variety of approaches such as repeated addition, equal-sized groups, arrays, area models, equal jumps on a number line, and skip counting • determine the total number of objects when equally-sized groups of objects are combined or arranged in arrays up to 10 by 10 • model, create, and describe contextual multiplication situations in which equivalent sets of concrete objects are joined *Dividing Whole Numbers, Fractions, and Decimals* • solve one-step and two-step problems involving multiplication and division within 100 using strategies based on objects; pictorial models, including arrays, area models, and equal groups; properties of operations; or recall of facts • determine a quotient using the relationship between multiplication and division *Continued*

4.4	Prerequisite Skills/Links to TEKS Vertical Alignment
	• determine the number of objects in each group when a set of objects is partitioned into equal shares or a set of objects is shared equally • model, create, and describe contextual division situations in which a set of concrete objects is separated into equivalent sets **Adding to/taking away skills** • use informal strategies to share or divide up to 10 items equally • use concrete models or make a verbal word problem for subtracting 1–5 objects from a set • use concrete models or make a verbal word problem for adding up to 5 objects

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

STAAR Reporting Category 2 – Computations and Algebraic Relationships: The student will demonstrate an understanding of how to perform operations and represent algebraic relationships.

TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations	Essence of TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations
(4.5) Algebraic reasoning. The student applies mathematical process standards to develop concepts of expressions and equations. The student is expected to (A) represent multi-step problems involving the four operations with whole numbers using strip diagrams and equations with a letter standing for the unknown quantity; Readiness Standard (B) represent problems using an input-output table and numerical expressions to generate a number pattern that follows a given rule representing the relationship of the values in the resulting sequence and their position in the sequence. Readiness Standard	Models or solves problems involving whole number relationships.

4.5	Prerequisite Skills/Links to TEKS Vertical Alignment

Representing and Solving Algebraic Relationships
- represent real-world relationships using number pairs in a table and verbal descriptions
- determine the unknown whole number in a multiplication or division equation relating three whole numbers when the unknown is either a missing factor or product
- represent and solve one- and two-step multiplication and division problems within 100 using arrays, strip diagrams, and equations
- represent one- and two- step problems involving addition and subtraction of whole numbers to 1,000 using pictorial models, number lines, and equations
- represent and solve addition and subtraction word problems where unknowns may be any one of the terms in the problem
- generate and solve problem situations for a given mathematical number sentence involving addition and subtraction of whole numbers within 1,000
- determine the unknown whole number in an addition or subtraction equation when the unknown may be any one of the three or four terms in the equation
- understand that the equal sign represents a relationship where expressions on each side of the equal sign represent the same value(s)
- represent word problems involving addition and subtraction of whole numbers up to 20 using concrete and pictorial models and number sentences
- generate and solve problem situations when given a number sentence involving addition or subtraction of numbers within 20

Classification and patterns skills
- recognize and create patterns

4.5	Prerequisite Skills/Links to TEKS Vertical Alignment

Adding and Subtracting Whole Numbers, Fractions, and Decimals
- round to the nearest 10 or 100 or use compatible numbers to estimate solutions to addition and subtraction problems
- solve with fluency one- step and two-step problems involving addition and subtraction within 1,000 using strategies based on place value, properties of operations, and the relationship between addition and subtraction
- solve one-step and multi-step word problems involving addition and subtraction within 1,000 using a variety of strategies based on place value, including algorithms
- add up to four two-digit numbers and subtract two- digit numbers using mental strategies and algorithms based on knowledge of place value and properties of operations
- recall basic facts to add and subtract within 20 with automaticity
- explain strategies used to solve addition and subtraction problems up to 20 using spoken words, objects, pictorial models, and number sentences
- apply basic fact strategies to add and subtract within 20, including making 10 and decomposing a number leading to a 10
- compose 10 with two or more addends with and without concrete objects
- use objects and pictorial models to solve word problems involving joining, separating, and comparing sets within 20 and unknowns as any one of the terms in the problem such as 2 + 4 = [ ]; 3 + [ ] = 7; and 5 = [ ] − 3
- use concrete and pictorial models to determine the sum of a multiple of 10 and a one- digit number in problems up to 99
- explain the strategies used to solve problems involving adding and subtracting within 10 using spoken words, concrete and pictorial models, and number sentences
- solve word problems using objects and drawings to find sums up to 10 and differences within 10
- model the action of joining to represent addition and the action of separating to represent subtraction

Multiplying Whole Numbers, Fractions, and Decimals
- describe a multiplication expression as a comparison such as 3 x 24 represents 3 times as much as 24
- use strategies and algorithms, including the standard algorithm, to multiply a two-digit number by a one-digit number. Strategies may include mental math, partial products, and the commutative, associative, and distributive properties
- recall facts to multiply up to 10 by 10 with automaticity and recall the corresponding division facts
- represent multiplication facts by using a variety of approaches such as repeated addition, equal-sized groups, arrays, area models, equal jumps on a number line, and skip counting
- determine the total number of objects when equally-sized groups of objects are combined or arranged in arrays up to 10 by 10
- model, create, and describe contextual multiplication situations in which equivalent sets of concrete objects are joined

Dividing Whole Numbers, Fractions, and Decimals
- solve one-step and two-step problems involving multiplication and division within 100 using strategies based on objects; pictorial models, including arrays, area models, and equal groups; properties of operations; or recall of facts
- determine a quotient using the relationship between multiplication and division

4.5	**Prerequisite Skills/Links to TEKS Vertical Alignment**
	• determine the number of objects in each group when a set of objects is partitioned into equal shares or a set of objects is shared equally • model, create, and describe contextual division situations in which a set of concrete objects is separated into equivalent sets **Adding to/taking away skills** • use informal strategies to share or divide up to 10 items equally • use concrete models or make a verbal word problem for subtracting 1–5 objects from a set • use concrete models or make a verbal word problem for adding up to 5 objects

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

STAAR Reporting Category 3 – Geometry and Measurement: The student will demonstrate an understanding of how to represent and apply geometry and measurement concepts.	
TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectation	**Essence of TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectation**
(4.5) Algebraic reasoning. The student applies mathematical process standards to develop concepts of expressions and equations. The student is expected to (D) solve problems related to perimeter and area of rectangles where dimensions are whole numbers. Readiness Standard	Solves problems involving perimeter or area of rectangles.

4.5	**Prerequisite Skills/Links to TEKS Vertical Alignment**
	Measuring Length, Area, Volume, and Weight/Mass • determine liquid volume (capacity) or weight using appropriate units and tools • determine when it is appropriate to use measurements of liquid volume (capacity) or weight • determine the perimeter of a polygon or a missing length when given perimeter and remaining side lengths in problems • decompose two congruent two-dimensional figures into parts with equal areas and express the area of each part as a unit fraction of the whole and recognize that equal shares of identical wholes need not have the same shape • decompose composite figures formed by rectangles into non-overlapping rectangles to determine the area of the original figure using the additive property of area • determine the area of rectangles with whole number side lengths in problems using multiplication related to the number of rows times the number of unit squares in each row • use concrete models of square units to find the area of a rectangle by covering it with no gaps or overlaps, counting to find the total number of square units, and describing the measurement using a number and the unit • determine a solution to a problem involving length, including estimating lengths • determine the length of an object to the nearest marked unit using rulers, yardsticks, meter sticks, or measuring tapes • describe the inverse relationship between the size of the unit and the number of units needed to equal the length of an object • find the length of objects using concrete models for standard units of length • describe a length to the nearest whole unit using a number and a unit • measure the same object/distance with units of two different lengths and describe how and why the measurements differ • illustrate that the length of an object is the number of same-size units of length that, when laid end-to-end with no gaps or overlaps, reach from one end of the object to the other • use measuring tools to measure the length of objects to reinforce the continuous nature of linear measurement • compare two objects with a common measurable attribute to see which object has more of/less of the attribute and describe the difference • give an example of a measurable attribute of a given object, including length, capacity, and weight

4.5	Prerequisite Skills/Links to TEKS Vertical Alignment
	Measurement skills • informally recognize and compare weights of objects or people • recognize how much can be placed within an object • recognize and compare heights or lengths of people or objects

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

STAAR Reporting Category 3 – Geometry and Measurement: The student will demonstrate an understanding of how to represent and apply geometry and measurement concepts.

TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations	Essence of TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations
(4.6) Geometry and measurement. The student applies mathematical process standards to analyze geometric attributes in order to develop generalizations about their properties. The student is expected to (A) identify points, lines, line segments, rays, angles, and perpendicular and parallel lines; Supporting Standard (B) identify and draw one or more lines of symmetry, if they exist, for a two-dimensional figure; Supporting Standard (C) apply knowledge of right angles to identify acute, right, and obtuse triangles; Supporting Standard (D) classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines or the presence or absence of angles of a specified size. Readiness Standard	Identifies one-and two-dimensional geometric figures using attributes.

4.6	Prerequisite Skills/Links to TEKS Vertical Alignment
	Identifying and Using Attributes of Geometric Figures • use attributes to recognize rhombuses, parallelograms, trapezoids, rectangles, and squares as examples of quadrilaterals and draw examples of quadrilaterals that do not belong to any of these subcategories • classify and sort two- and three-dimensional figures, including cones, cylinders, spheres, triangular and rectangular prisms, and cubes, based on attributes using formal geometric language • decompose two-dimensional shapes such as cutting out a square from a rectangle, dividing a shape in half, or partitioning a rectangle into identical triangles and identify the resulting geometric parts • compose two-dimensional shapes and three-dimensional solids with given properties or attributes • classify and sort polygons with 12 or fewer sides according to attributes, including identifying the number of sides and number of vertices • classify and sort three-dimensional solids, including spheres, cones, cylinders, rectangular prisms (including cubes as special rectangular prisms), and triangular prisms, based on attributes using formal geometric language • create two-dimensional shapes based on given attributes, including number of sides and vertices • compose two-dimensional shapes by joining two, three, or four figures to produce a target shape in more than one way if possible • identify three-dimensional solids, including spheres, cones, cylinders, rectangular prisms (including cubes), and triangular prisms, and describe their attributes using formal geometric language

Continued

4.6	Prerequisite Skills/Links to TEKS Vertical Alignment
	• identify two-dimensional shapes, including circles, triangles, rectangles, and squares, as special rectangles, rhombuses, and hexagons, and describe their attributes using formal geometric language
	• create two-dimensional figures, including circles, triangles, rectangles, and squares, as special rectangles, rhombuses, and hexagons
	• distinguish between attributes that define a two-dimensional or three-dimensional figure and attributes that do not define the shape
	• classify and sort regular and irregular two-dimensional shapes based on attributes using informal geometric language
	• create two-dimensional shapes using a variety of materials and drawings
	• classify and sort a variety of regular and irregular two- and three-dimensional figures regardless of orientation or size
	• identify attributes of two-dimensional shapes using informal and formal geometric language interchangeably
	• identify two-dimensional components of three-dimensional objects
	• identify three-dimensional solids, including cylinders, cones, spheres, and cubes, in the real world
	• identify two-dimensional shapes, including circles, triangles, rectangles, and squares as special rectangles
	Geometry and spatial sense skills
	• slide, flip, and turn shapes to demonstrate that the shapes remain the same
	• create shapes
	• name common shapes

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

STAAR Reporting Category 3 – Geometry and Measurement: The student will demonstrate an understanding of how to represent and apply geometry and measurement concepts.	
TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations	**Essence of TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations**
(4.7) Geometry and measurement. The student applies mathematical process standards to solve problems involving angles less than or equal to 180 degrees. The student is expected to (C) determine the approximate measures of angles in degrees to the nearest whole number using a protractor; Readiness Standard (D) draw an angle with a given measure; Supporting Standard (E) determine the measure of an unknown angle formed by two non-overlapping adjacent angles given one or both angle measures. Supporting Standard	Finds the measures of angles.

4.7	Prerequisite Skills/Links to TEKS Vertical Alignment
	Measuring Length, Area, Volume, and Weight/Mass • determine liquid volume (capacity) or weight using appropriate units and tools • determine when it is appropriate to use measurements of liquid volume (capacity) or weight • determine the perimeter of a polygon or a missing length when given perimeter and remaining side lengths in problems • decompose two congruent two-dimensional figures into parts with equal areas and express the area of each part as a unit fraction of the whole and recognize that equal shares of identical wholes need not have the same shape • decompose composite figures formed by rectangles into non-overlapping rectangles to determine the area of the original figure using the additive property of area • determine the area of rectangles with whole number side lengths in problems using multiplication related to the number of rows times the number of unit squares in each row • use concrete models of square units to find the area of a rectangle by covering it with no gaps or overlaps, counting to find the total number of square units, and describing the measurement using a number and the unit • determine a solution to a problem involving length, including estimating lengths • determine the length of an object to the nearest marked unit using rulers, yardsticks, meter sticks, or measuring tapes • describe the inverse relationship between the size of the unit and the number of units needed to equal the length of an object • find the length of objects using concrete models for standard units of length • describe a length to the nearest whole unit using a number and a unit • measure the same object/ distance with units of two different lengths and describe how and why the measurements differ • illustrate that the length of an object is the number of same-size units of length that, when laid end-to-end with no gaps or overlaps, reach from one end of the object to the other

Continued

4.7	Prerequisite Skills/Links to TEKS Vertical Alignment
	• use measuring tools to measure the length of objects to reinforce the continuous nature of linear measurement • compare two objects with a common measurable attribute to see which object has more of/ less of the attribute and describe the difference • give an example of a measurable attribute of a given object, including length, capacity, and weight **Measurement skills** • informally recognize and compare weights of objects or people • recognize how much can be placed within an object • recognize and compare heights or lengths of people or objects

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

STAAR Reporting Category 3 – Geometry and Measurement: The student will demonstrate an understanding of how to represent and apply geometry and measurement concepts.	
TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations	**Essence of TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations**
(4.8) Geometry and measurement. The student applies mathematical process standards to select appropriate customary and metric units, strategies, and tools to solve problems involving measurement. The student is expected to (A) identify relative sizes of measurement units within the customary and metric systems; Supporting Standard (B) convert measurements within the same measurement system, customary or metric, from a smaller unit into a larger unit or a larger unit into a smaller unit when given other equivalent measures represented in a table; Supporting Standard (C) solve problems that deal with measurements of length, intervals of time, liquid volumes, mass, and money using addition, subtraction, multiplication, or division as appropriate. Readiness Standard	Solves problems involving length, time, liquid volume, mass/ weight, or money.

4.8	Prerequisite Skills/Links to TEKS Vertical Alignment
	Measuring Length, Area, Volume, and Weight/Mass • determine liquid volume (capacity) or weight using appropriate units and tools • determine when it is appropriate to use measurements of liquid volume (capacity) or weight • determine the perimeter of a polygon or a missing length when given perimeter and remaining side lengths in problems • decompose two congruent two-dimensional figures into parts with equal areas and express the area of each part as a unit fraction of the whole and recognize that equal shares of identical wholes need not have the same shape • decompose composite figures formed by rectangles into non-overlapping rectangles to determine the area of the original figure using the additive property of area • determine the area of rectangles with whole number side lengths in problems using multiplication related to the number of rows times the number of unit squares in each row • use concrete models of square units to find the area of a rectangle by covering it with no gaps or overlaps, counting to find the total number of square units, and describing the measurement using a number and the unit • determine a solution to a problem involving length, including estimating lengths • determine the length of an object to the nearest marked unit using rulers, yardsticks, meter sticks, or measuring tapes • describe the inverse relationship between the size of the unit and the number of units needed to equal the length of an object

Continued

4.8	Prerequisite Skills/Links to TEKS Vertical Alignment
	- find the length of objects using concrete models for standard units of length - describe a length to the nearest whole unit using a number and a unit - measure the same object/ distance with units of two different lengths and describe how and why the measurements differ - illustrate that the length of an object is the number of same-size units of length that, when laid end-to-end with no gaps or overlaps, reach from one end of the object to the other - use measuring tools to measure the length of objects to reinforce the continuous nature of linear measurement - compare two objects with a common measurable attribute to see which object has more of/ less of the attribute and describe the difference - give an example of a measurable attribute of a given object, including length, capacity, and weight *Measuring Time* - determine the solutions to problems involving addition and subtraction of time intervals in minutes using pictorial models or tools such as a 15-minute event plus a 30-minute event equals 45 minutes - read and write time to the nearest one-minute increment using analog and digital clocks and distinguish between a.m. and p.m. (2) - tell time to the hour and half hour using analog and digital clocks **Measurement skills** - use language to describe concepts associated with the passing of time - informally recognize and compare weights of objects or people - recognize how much can be placed within an object - recognize and compare heights or lengths of people or objects

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

STAAR Reporting Category 4 – Data Analysis and Personal Financial Literacy: The student will demonstrate an understanding of how to represent and analyze data and how to describe and apply personal financial concepts.

TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations	Essence of TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations
(4.9) Data analysis. The student applies mathematical process standards to solve problems by collecting, organizing, displaying, and interpreting data. The student is expected to (A) represent data on a frequency table, dot plot, or stem-and-leaf plot marked with whole numbers and fractions; Readiness Standard (B) solve one- and two-step problems using data in whole number, decimal, and fraction form in a frequency table, dot plot, or stem-and-leaf plot. Supporting Standard	Uses graphs to organize and interpret data.

4.9	Prerequisite Skills/Links to TEKS Vertical Alignment

Collecting and Representing Data
- summarize a data set with multiple categories using a frequency table, dot plot, pictograph, or bar graph with scaled intervals
- organize a collection of data with up to four categories using pictographs and bar graphs with intervals of one or more
- explain that the length of a bar in a bar graph or the number of pictures in a pictograph represents the number of data points for a given category
- use data to create picture and bar-type graphs
- collect, sort, and organize data in up to three categories using models/ representations such as tally marks or T-charts
- use data to create real- object and picture graphs
- collect, sort, and organize data into two or three categories

Classification and patterns skills
- collect data and organize it in a graphic representation
- sort objects that are the same and different into groups and use language to describe how the groups are similar and different

Using Data
- solve one- and two-step problems using categorical data represented with a frequency table, dot plot, pictograph, or bar graph with scaled intervals
- draw conclusions and make predictions from information in a graph
- write and solve one-step word problems involving addition or subtraction using data represented within pictographs and bar graphs with intervals of one

Continued

4.9	Prerequisite Skills/Links to TEKS Vertical Alignment
	• draw conclusions and generate and answer questions using information from picture and bar-type graphs • draw conclusions from real-object and picture graphs

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

STAAR Reporting Category 4 – Data Analysis and Personal Financial Literacy: The student will demonstrate an understanding of how to represent and analyze data and how to describe and apply personal financial concepts.

TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations	Essence of TEKS Knowledge and Skills Statement/ STAAR-Tested Student Expectations
(4.10) Personal financial literacy. The student applies mathematical process standards to manage one's financial resources effectively for lifetime financial security. The student is expected to (A) distinguish between fixed and variable expenses; Supporting Standard (B) calculate profit in a given situation; Supporting Standard (E) describe the basic purpose of financial institutions, including keeping money safe, borrowing money, and lending. Supporting Standard	Recognizes how money can be obtained, spent, and used to make a profit.

4.10	Prerequisite Skills/Links to TEKS Vertical Alignment

Understanding the Connections Among Income, Expenses, and Careers
- explain the connection between human capital/ labor and income
- identify income as a means of obtaining goods and services, oftentimes making choices between wants and needs
- define money earned as income
- distinguish between wants and needs and identify income as a source to meet one's wants and needs
- list simple skills required for jobs
- differentiate between money received as income and money received as gifts
- identify ways to earn income

Managing Finances
- identify decisions involving income, spending, saving, credit, and charitable giving
- list reasons to save and explain the benefit of a savings plan, including for college
- explain that credit is used when wants or needs exceed the ability to pay and that it is the borrower's responsibility to pay it back to the lender, usually with interest
- identify the costs and benefits of planned and unplanned spending decisions
- describe the relationship between the availability or scarcity of resources and how that impacts cost
- differentiate between producers and consumers and calculate the cost to produce a simple item
- identify examples of lending and use concepts of benefits and costs to evaluate lending decisions
- identify examples of borrowing and distinguish between responsible and irresponsible borrowing

Continued

4.10	**Prerequisite Skills/Links to TEKS Vertical Alignment**
	• distinguish between a deposit and a withdrawal
	• explain that saving is an alternative to spending
	• calculate how money saved can accumulate into a larger amount over time
	• consider charitable giving
	• distinguish between spending and saving
	Determining Values of Coins and Bills
	• determine the value of a collection of coins and bills
	• use the cent symbol, dollar sign, and the decimal point to name the value of a collection of coins
	• determine the value of a collection of coins up to one dollar
	• use relationships to count by twos, fives, and tens to determine the value of a collection of pennies, nickels, and/ or dimes
	• write a number with the cent symbol to describe the value of a coin
	• identify U.S. coins, including pennies, nickels, dimes, and quarters, by value and describe the relationships among them
	• identify U.S. coins by name, including pennies, nickels, dimes, and quarters

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.

Mathematical Process Standards – Mathematical process standards will not be listed under a separate reporting category. Instead, they will be incorporated into test questions across reporting categories since the application of mathematical process standards is part of each knowledge statement.
TEKS Knowledge and Skills Statement/STAAR-Tested Student Expectations
(4.1) **Mathematical process standards.** The student uses mathematical processes to acquire and demonstrate mathematical understanding. The student is expected to   (A) apply mathematics to problems arising in everyday life, society, and the workplace;   (B) use a problem-solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying the solution, and evaluating the problem-solving process and the reasonableness of the solution;   (C) select tools, including real objects, manipulatives, paper and pencil, and technology as appropriate, and techniques, including mental math, estimation, and number sense as appropriate, to solve problems;   (D) communicate mathematical ideas, reasoning, and their implications using multiple representations, including symbols, diagrams, graphs, and language as appropriate;   (E) create and use representations to organize, record, and communicate mathematical ideas;   (F) analyze mathematical relationships to connect and communicate mathematical ideas; and   (G) display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication.

4.1	**Prerequisite Skills/Links to TEKS Vertical Alignment**
	• display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication. • analyze mathematical relationships to connect and communicate mathematical ideas • create and use representations to organize, record, and communicate mathematical ideas • communicate mathematical ideas, reasoning, and their implications using multiple representations, including symbols, diagrams, graphs, and language as appropriate • select tools, including real objects, manipulatives, paper and pencil, and technology as appropriate, and techniques, including mental math, estimation, and number sense as appropriate, to solve problems • use a problem-solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying the solution, and evaluating the problem-solving process and the reasonableness of the solution • apply mathematics to problems arising in everyday life, society, and the workplace

NOTE: Under each heading the prerequisite skills are arranged from the highest grade level to the lowest grade level.
